State Share

of K-12

**Funding** 

# Referendum C

Allowed Colorado to retain and spend revenue collected above TABOR limit for five years and allows the state to retain and spend all revenue up to a "cap," which is equal to the previous year's revenue allowance plus inflation and population growth.

2005

"Negative Factor" Legislators decide that only certain

parts of the school finance formula must grow by inflation. This allowed the creation of a budget stabilization factor that amounts to a reduction in revenue for schools. This allowed compliance with A23 while cutting K-12 funding.

2013

# Dwyer v. State of Colorado

Local Share of K-12

Funding

2016

State Share

of K-12

Funding

Colorado Supreme Court rules the state's funding cuts of nearly \$1 billion per year since the Great Recession are in accordance with the Colorado Constitution. This means that the "Negative Factor" does not violate Amendment 23.

1994

RAR: 12.86%

Average Mill Levy: 38 mills

Set limits on amount of revenue that can be collected by state and local governments, imposed a limit on property taxes, and eliminated the ability of elected officials to increase revenue or change property assessment rates.

# **Amendment 23**

2000

Established minimum increase in "base" per pupil funding by at least the rate of inflation and created the State Education Fund with the goal of catching K-12 funding up to 1988-89 levels adjusted for inflation.

\$8,544

school funding, which

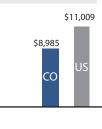

#### Mill Stabilization

2007

SB07-199 fixed the 1994 school finance law that automatically cut local property taxes (mill levies) when collections were estimated to exeed TABOR provisions on property tax collections.

#### State v. Lobato

Colorado Supreme Court overrules 2011 Denver District Court decision, by declaring the current school finance system is "thorough and uniform," as required by the Colorado Constitution.

The latest figures show that Colorado spends \$2,024 less per student than the national average.

\$6,487 \$5,999

In the early 1980s Colorado spent \$488 more per student than the national average.

... Statewide growth in residential property values outpaced commerical property and that pushed down residential assessment rates to comply with the Gallagher requirement of a consistent relationship between revenue generated by home and business property. To counter falling assessment rates, local leaders could float mill levies so a school district's total dollars remained constant. At that time, the state still had the flexibility to

... But with the passage of schools was restricted because from floating (2) state law automatically cut mill rates in districts whose prior year's spending exceeded the limit, which led to falling local dollars and (3) TABOR's revenue restrictions limited the state's with state dollars...

...voter-approved Referendum ... Falling local dollars put C temporarily eased budget pressures by letting the state keep money above the TABOR limit. This allowed the state to retain several billion dollars in flexibility and less funding revenue that would have for other public programs otherwise been returned to that are funded by state taxpayers. Also, a state law change meant that local higher education, prisons, districts that passed a "de-bruccourts, health and human ing" measure no longer had to reduce mill rates. This helped stabilize the local share . . .

By 2000, Colorado

was spending \$957

less per student

than the national

average.

. . .Then the Great Recession hit, and Colorado's tax collections fell by 13 percent, making it nearly impossible to fund all the public programs financed with tax dollars and provide the education dollars necessary to comply with A23. So the state determined that A23 didn't apply to all parts of the school funding formula, which helped introduce the "Negative Factor"...

... Funding for schools in Colorado in 2016 was \$831 million below where it would have been without the Negative Factor. The local share of K-12 funding has fallen significantly since the 1980s, and the state now spends \$2,024 less per student than the national average. In response, many school districts have relied on local override elections to raise money. which has furthered the disparity between wealthy and poor districts.

In 1982, near the end of a period of strong economic growth, voters passed the Gallagher Amendment to shield homeowners from large property tax increases as home values rose rapidly. Over time, residential property tax collections fell, meaning fewer local dollars available for school districts. This shifted more of the responsibility to finance education to the state...
